Earth will interact tidally with the Sun's outer

atmosphere, which would decrease Earth's orbital radius. Drag from the

chromosphere of the Sun would reduce Earth's orbit. These effects will counterbalance

the impact of mass loss by the Sun, and the Sun will likely engulf Earth

in about 7.59 billion years.

Future of Earth - Wikipedia

en.wikipedia : wiki : Future_of_Earth

Nothing is more important to us on Earth than the Sun.

Without the Sun's heat and light, the Earth would be a lifeless ball of ice-coated rock.

The Sun warms our seas, stirs our atmosphere, generates our weather patterns,

and gives energy to the growing green plants that provide the food and oxygen for life on Earth.

The Sun and Us - A MEETING WITH THE UNIVERSE
