

O O bet365

Each Minesweeper game starts out with a grid of unmarked Squares. After clicking one of these squares, some of the squares will disappear, and some will remain blank; and some will have numbers on them. It's your job to use the numbers for figuring out which squares are safe and which are not.

Why are they safe? Well, they are safe because they are not adjacent to any mines. In other words, they are not adjacent to any squares that have numbers on them.

Why are they not safe? Well, they are not safe because they are adjacent to one or more mines. In other words, they are adjacent to one or more squares that have numbers on them.

So, the numbers on the squares tell you how many mines are adjacent to them. For example, a square with the number 1 means that there is one mine adjacent to it. A square with the number 2 means that there are two mines adjacent to it, and so on.

So, your job is to use the numbers to figure out which squares are safe and which are not. You can click on a square if you think it is safe, and you can flag a square if you think it contains a mine.
